

The Next Rural Economies: Constructing Rural Place in Global Economies

**Edited by
Greg Halseth, Sean Markey and David Bruce**

Rural policy in industrialized countries is currently undergoing significant change. 'Place-based economies', where the unique attributes and assets of individual places determine their attractiveness for particular types of activities and investments, are increasingly important for rural development. New understandings of competitiveness and conceptualizations of a new economy underline the importance of making strategic investments in rural community infrastructure.

The Next Rural Economies debates the future of rural development and highlights successes and failures to inform research, policy and community action. Case studies present discussions of the current state of rural community and economic restructuring and provide research and policy directions for constructing resilient and sustainable rural economies. Topics considered include seasonal economies, amenity migration, IT industries, sustainable and green energy, education and transportation developments. Challenging readers with alternative ways of looking and reacting to rural community development, this book will be necessary for researchers and policy makers in geography, economic development and community development.
