FALL 2019

BIOL 307-3 Ichthyology & Herpetology

This course focuses on the identification, comparative anatomy and evolution of fishes, amphibians and reptiles. Particular reference is made to species endemic to British Columbia.

ENSC 308-3 Northern Contaminated Environments

This course provides students with a broad knowledge base and a sound understanding of various environmental problems in the north, with particular emphasis on practical skills to address such problems.

ENSC 425-3 Climate Change and Global Warming

Climate change and global warming caused by human activity has become one of the most significant environmental, social and economic threats that we have faced. This course presents the science of global climate change and global warming. Emphasis is placed on scientific principles responsible for climate changes, observed evidence of global climate change and global warming, and future climate change.

GEOG 200-3 British Columbia: People and Places

This course provides an introduction to the biophysical and human landscapes of British Columbia with a special emphasis on the relationship of Northern British Columbia to the rest of the province.

HIST 360-3 An Introduction to Environmental History

Environmental history examines changing relationships between humans and the environment, including how human societies have been shaped by the environment; how environment have influenced human societies, and how humans have thought about the environment.
