

SPRING/SUMMER COURSES REGISTER NOW!

BIOL 498-3 Bryology Date: Apr 29 – May 9

Sphagnum riparium Ångstr.

Apotreubia nana (S.Hatt. & Inoue) S.Hatt. & Mizut.

This is an immersive course in the identification, taxonomy, and ecology of mosses and liverworts of western Canada, with an emphasis on the identification and ecology of species of northern and coastal British Columbia. Students will gain practical and theoretical foundations in bryophyte anatomy, morphology, reproduction, physiology, ecology, and conservation through daily lectures, labs, and field trips. Pre-requisites: First-year Biology.

BIOL 301-3 Systematic Botany Field Course

Date: Aug 21 - 30

Learn about the taxonomy of vascular plants and how to identify the common plants found in the Northwest.

FNST 304-3 Indigenous Environmental Philosophy Date: June 19 - 25

A seminar exploring Indigenous philosophy, knowledge, contemporary issues and perspectives through a combination of lecture, discussion, and field trips

BIOL 350-3 Ethnobotany

Date: (weekends: July 12 – Aug 11)

This course will review traditional plant use worldwide and by First Nations in British Columbia. Special reference will be made to First Nations in and round Terrace. The course will be organized around food, medicinal, technological and spiritual uses of plants.

Topics covered will include traditional ecological knowledge (TEK), research protocols, basic phytochemistry and contemporary issues in ethnobotany.

No prerequisites required but knowledge of basic plant identification anatomy helpful.
