

AUTUMN DIETS OF GROUSE OF NORTHERN BC

Undergraduate Independent Study Project

January 2020 - APRIL 2021

If you are a 3rd or 4th Year Natural Resources or Biology Student with an interest in plant-animal interactions, we are looking for a student to help conduct grouse crop analyses to determine diets of Ruffed and Spruce Grouse from Northern BC. This is an unpaid position, but will provide a rich data set that can be analyzed and written up for an Independent Study Project and could result in a co-publication with another student.

For more information, please contact Roy Rea (reav@unbc.ca)
